

# HISTORICAL PRESERVATION

## Historic Building and Archaeological Resources

Historic and archaeological resources are found in the Gateway Region. The below table contains historical places as defined by the “National Register of Historical Places”. The State Historic Preservation Office should be contacted if any ground disturbing practices will impact these areas. Undiscovered archaeological resources may also exist. A cultural survey must be conducted before direct physical change begins on a project that uses federal money or requires a federal permit.

Additional resources include:
